

Acronis True Image Enterprise Product Suite

Acronis True Image Enterprise Server for Windows

- A comprehensive backup and bare-metal restore solution for Windows servers, using the fastest and most reliable method to restore enterprise systems
- Ensures business continuity with a central management console and support for automated backup

Acronis True Image Corporate Workstation

- A comprehensive backup and bare-metal restore solution for networked desktop PCs and laptops
- Ensures that all corporate data is restored — not just the data in the data center — with vital features such as remote administration and scheduling to automate backup

Acronis True Image Server for Windows and Acronis True Image Server for Linux

- Deliver cost-effective, easy-to-use backup and bare-metal restore solutions for businesses running Windows and Linux servers
- Acronis True Image Server for Linux is the only off-the-shelf, commercial disk imaging backup and bare-metal restore product for Linux servers!

- **You've planned for the worst — a down system requiring a full rebuild or bare-metal restore — with a backup and restore solution. Or have you? Are you sure your systems can be up and running in the shortest time possible?**
- **Acronis True Image software, using disk imaging technology, ensures your business is up and running virtually in minutes, providing a superior backup and bare-metal restore solution compared to traditional file-based approaches**

System Restore in Minutes, not Hours or Days

- The Acronis True Image corporate product suite uses the fastest method for backup and bare-metal restore of Windows and Linux systems
- Here's how it all works: The product creates an exact replica of a hard disk — including all the data your system needs to run — the operating system, patches, databases, and applications. The image is made at the sector level, so everything on the disk, including open Windows files and encrypted data, is duplicated in total
- No need to reboot your system to create an image — the product can create an image while you work, using the Acronis Drive Snapshot technology
- After a system crash, use the backup image to do a bare-metal restore of the entire system or simply replace lost files and folders from your disk backup
- After that, you are up and running
- No searching for product serial numbers, reinstalling operating systems, or applications!

*A Solution for
the Entire Business
IT Environment*

Which version is for your business?

Look below for a feature comparison to find the right version for you.
